

**Košice, 1 May 2022** – YQ Service, Slovak independent automotive publisher, has become the 9<sup>th</sup> [ADPA](#) (European Independent Automotive Data Publishers Association) member since 1<sup>st</sup> May 2022. Now, we are a holder of the label which aims to ensure fair access to automotive data and information as well as to provide competitive framework conditions for independent data publishers.

The Label is based on strong requirements, making it possible for automotive data publishers to join the association and **get the label only if they follow the highest standards in terms of data sourcing**. It ensures that they are sourcing a significant amount of the **repair and maintenance information they process from the vehicle manufacturers themselves**. It is indeed a significant financial and technical effort that holders of the Label undertake to ensure they can offer the most credible and reliable services to their customers and should be acknowledged.

Nine companies are currently holders of the Label. The following companies fulfil the criteria to be members of the association: ALLDATA Europe GmbH (Germany), Autodata Ltd (UK), HaynesPro (Netherlands), Hella Gutmann Solutions A/S (Denmark), Robert Bosch GmbH (Germany), TecAlliance GmbH (Germany), Tekné Consulting Srl (Italy), TOPMOTIVE/DVSE GmbH (Germany) and **YQ Service Ltd (Slovakia)**.

It is a huge achievement for YQ Service which has been invited to the premium club of the automotive publishers with one clear mission: to design and provide competitive, innovative, and multi-brand products and services to operators of the automotive aftermarket powered by the data coming directly from the first source – vehicle manufacturer.

ADPA is a Member of AFCAR, the Alliance for the Freedom of Car Repair in the European Union and therefore YQ Service is now in the centre of significant discussions and decisions which effect the future development of automotive aftermarket business in the upcoming years. Thank you for your support and attention.

Peter Erdélyi, CEO
